PUZZLERS

#39 RUBE GOLDBERG MACHINE

Puzzle

Use a rube goldberg machine to demonstrate energy transfer.

Standards & Connections

NGSS.3-5-ETS1, NGSS.MS-ETS1, NGSS.HS-PS3-3

Background:

Energy is defined as the ability to do work. There are two main types of energy: potential and kinetic. Potential energy is the energy an object has as a result of its position. Kinetic energy is energy in motion or movement. The Conservation of Energy principle states that "the amount of energy remains constant and energy is neither created nor destroyed. Energy can be converted from one form to another (potential energy can be converted to kinetic energy), but the total energy within the domain remains fixed." Rube Goldberg was an inventor and cartoonist known for his drawings depicting elaborate contraptions that solved a simple task."

Suggested Materials:

Construction paper, marbles, small paper cups, paper towel tubes, string, jumbo paper clips, rubber bands, hot glue, tape, dominos, balloons, pins, scissors

IDENTIFY

Share the background information with the students, then share the puzzle to be solved. Determine constraints (e.g., time alotted, space, materials provided, etc.) and divide students into small groups.

IMAGINE

Ask a series of questions to help students brainstorm solutions to the puzzle. Encourage students to list all ideas – don't hold back! Before moving on, make sure each group selects a solution that fits within the contraints.

Ask: How can you can solve this puzzle? Which of your ideas can you build a prototype for given the constraints?

DESIGN

Students diagram the prototype, identify the materials needed to build the prototype, and write out the steps to take. Students describe the expected outcomes.

Ask: What steps will you take to create your solution? What do you expect your solution to look like and be able to do?

CREATE

Students follow their design plan and build their prototypes. Monitor their progress and remind them about how much time they have.

TEST & IMPROVE

Students evaluate their creation and compare it with the expected outcomes. Students seek areas of improvement and make changes where needed.

SHARE

Students share their solution to the puzzle and communicate lessons learned.

Ask: What was your biggest takeaway? What would you do differently?

Additional Resources:

For more background information on this topic, please visit www.purpleplow.org.

Have students identify where the kinetic and potential energy is in their Rube Goldberg machines. You can specify the "simple task" that the machine does – Pop a balloon, staple a piece of paper, close a door, etc.
