Challenge Rationale

Agriculture consumes large amounts of energy in the production of our food. Farms consume energy both directly through the use of diesel, electricity, propane, natural gas and renewable fuels as well as indirectly through the use of fuel in the production of fertilizers, pesticides and feedstock. In this challenge, students will learn about energy in various forms and design as well as build and share a solution that diversifies energy consumption.
Establishing The Challenge

IDENTIFY A CHALLENGE

A well-established, diversified energy system can provide benefits to society. Investment in diversifying our energy portfolio can reduce emissions and insulate against price shocks from overreliance on one form of energy. About 90% of American energy consumption is from nonrenewable sources—primarily distillate fuels and coal. Renewable energy comprises a fraction of the American energy portfolio — approximately 10% of total energy consumption.¹

Energy is needed to produce the food we eat and transport it to consumers here at home and around the world. The most recent data from the USDA shows that the agricultural sector consumed “1,714 trillion British Thermal Units (BTU) of energy in 2014.”² Renewable energy can help farmers become more self-sufficient, diversify income and promote practices that can benefit the environment. While agriculture consumes energy in a multitude of ways, there is also an opportunity to utilize renewable energy to meet the needs of the industry.

CHALLENGE QUESTION

How can we improve or diversify the way agriculture generates or consumes energy?

THIS SOLUTION MUST ADDRESS THE FOLLOWING NEEDS:

• Production as well as economic, environmental and societal needs
• Trade-offs of using the different energy sources

SUCCESS WILL BE DETERMINED BY:

• Production of a model solution that uses a renewable energy source in an agricultural application to diversify energy consumption and demonstrates innovation
• Producing and sharing a presentation that communicates knowledge gained
• Sharing progress and results on social media by tagging @ThePurplePlow
Standards Addressed

NEXT GENERATION SCIENCE STANDARDS

https://www.nextgenscience.org/

NGSS- ENGINEERING DESIGN PROCESS (3-5)

• 3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.
• 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.
• 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.

NGSS- ENGINEERING DESIGN PROCESS (6-8)

• MS-ETS1-1 Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.
• MS-ETS1-2 Evaluate competing design solutions using a systematic process to determine how well they meet the criteria and constraints of the problem.
• MS-ETS1-3 Analyze data from tests to determine similarities and differences among several design solutions to identify the best characteristics of each that can be combined into a new solution to better meet the criteria for success.
• MS-ETS1-4 Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.

NGSS- ENGINEERING DESIGN PROCESS (9-12)

• HS-ETS1-1 Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.
• HS-ETS1-2 Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.
• HS-ETS1-3 Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.
• HS-ETS1-4 Use a computer simulation to model the impact of proposed solutions to a complex real-world problem with numerous criteria and constraints on interactions within and between systems relevant to the problem.
Standards Addressed

**COMMON CORE**

http://www.corestandards.org/Math/
- CCSS.MATH.PRACTICE.MP2 Reason abstractly and quantitatively.
- CCSS.MATH.PRACTICE.MP3 Construct viable arguments and critique the reasoning of others.
- CCSS.MATH.PRACTICE.MP4 Model with mathematics.

http://www.corestandards.org/ELA-Literacy/

**INTEGRATION OF KNOWLEDGE AND IDEAS**
- CCS.ELA-LITERACY.CCRA.R7 Integrate and evaluate content presented in diverse media and formats, including visually and quantitatively, as well as in words.
- CCS.ELA-LITERACY.CCRA.R8 Delineate and evaluate the argument and specific claims in a text, including the validity of the reasoning as well as the relevance and sufficiency of the evidence.
- CCS.ELA-LITERACY.CCRA.R9 Analyze how two or more texts address similar themes or topics in order to build knowledge or to compare the approaches the authors take.

**COMPREHENSION AND COLLABORATION**
- CSS.ELA-LITERACY.SL.9-10.1 Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9-10 topics, texts, and issues, building on others’ ideas and expressing their own clearly and persuasively.
- CCS.ELA-LITERACY.SL.7.1 Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 7 topics, texts, and issues, building on others’ ideas and expressing their own clearly.

**PRESENTATION OF KNOWLEDGE AND IDEAS**
- CCS.ELA-LITERACY.CCRA.SL.5 Make strategic use of digital media and visual displays of data to express information and enhance understanding of presentations.
- CCS.ELA-LITERACY.SL.7.5 Include multimedia components and visual displays in presentations to clarify claims and findings and emphasize salient points.
- CCS.ELA-LITERACY.SL.9-10.4 Present information, findings, and supporting evidence clearly, concisely, and logically such that listeners can follow the line of reasoning and the organization, development, substance, and style are appropriate to purpose, audience, and task.
- CCS.ELA-LITERACY.SL.9-10.5 Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.
Guiding The Challenge

Each Purple Plow Challenge can be implemented in a variety of methods, time frames, and programs. Follow the steps below to help determine how this challenge will best fit the current situation and educational environment.

1. **REVIEW** the Purple Plow “Design Process” (next page) and the “Lesson Packet” documents. Note that the lessons are encouraged but not required.

2. **EXAMINE** the suggested timeline to determine ways to integrate the challenge and lessons to fit your needs.

3. With the time frame in mind, **USE THE GUIDANCE PROVIDED** in this section to help students progress through the challenge. This guidance includes suggested student prompts, guiding questions for students, signs of step completion, and journaling opportunities. The student prompts, guiding questions, and journal prompts are found in the “Student Guide.” Facilitators or students may determine the method by which they record their research and discoveries found for these prompts and journal reflection questions.

**SUGGESTED TIMELINE**

This sample pacing guide is created for a 20-day calendar with a 45-minute class. It is important to remember that timing may vary on student’s pace, as well as how much time you dedicate to each of the steps listed below. Your students may return to certain steps and repeat the process, no journey is the same!

Challenge Design Process

**STEP ONE:** IDENTIFY
Define the problem and how it is affecting life globally, nationally, and locally. Research and consider how others have approached solving the problem. Describe why this problem needs a solution. Determine constraints (e.g., time, space, resources, etc.).

**STEP TWO:** IMAGINE
Brainstorm solutions to the problem. List all ideas – don’t hold back! Discuss and select the best possible solution.

**STEP THREE:** CREATE
Follow the design plan and build the prototype.

**STEP FOUR:** DESIGN
Diagram the prototype. Identify the materials needed to build the prototype. Write out the steps to take. Describe the expected outcomes.

**STEP FIVE:** TEST & IMPROVE
Test the design and collect quantitative and qualitative data. Discuss results and compare with the expected outcomes. Seek areas of improvement and make changes where needed.

**STEP SIX:** SHARE
Communicate what was learned. Share the design, data, and conclusions. Present results.
# Materials List

**SUGGESTED MATERIALS LIST**

The items listed below are suggested materials needed to conduct the challenge. Facilitators and students are encouraged to be creative and inventive in acquiring the materials needed to complete the challenge (e.g., purchased, recycled, donated, etc.).

<table>
<thead>

STEP ONE
IDENTIFY

PURPOSE OF STEP
Define the problem and how it is affecting life globally, nationally, and locally. Research and consider how others have approached solving the problem including how people have addressed this problem historically. Describe why this problem needs a solution. Determine constraints (e.g., time, space, resources, etc.).

STUDENT PROMPTS AND GUIDING QUESTIONS:

• What is energy?
• What are the different sources of energy?
• What are the trade-offs of using each type of energy?
• How do renewable and nonrenewable sources of energy affect the environment and climate?
• Why should we care about where we get our energy?
• How do we use energy in our daily lives? In food production?
• Compare and contrast energy generated from nonrenewable sources to energy generated from renewable sources.
• How does the agriculture industry consume energy?
• How does the agriculture industry produce energy?
• In what areas of production do farms use the most energy?
• What forms of renewable energy could be used on farms?

SIGNS OF STEP COMPLETION
Students will present a description of the challenge to the facilitator. They should include how this problem affects communities globally, nationally, and locally. The description should also include ways in which others have addressed finding a solution and constraints to be considered (e.g., time, space, resources, etc.).

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
STEP TWO
IMAGINE

PURPOSE OF STEP

Brainstorm solutions to the challenge. List all of your ideas – don’t hold back! Discuss and select the best possible solutions.

STUDENT PROMPTS AND GUIDING QUESTIONS:

- How do farms consume energy?
- In what areas of production do farms use the most energy?
- What forms of renewable energy could be used on farms?
- How is renewable energy used in agriculture?
- What current solutions are being used to conserve energy? To reduce greenhouse gases?
- What are engineers doing to improve our energy sources?

SIGNS OF STEP COMPLETION

Students will present a list of possible solutions to the identified challenge to the facilitator.

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
STEP THREE

DESIGN

PURPOSE OF STEP

Develop a possible solution and identify the materials needed to provide evidence for why the solution is creative, unique, and sustainable. Write out the steps to take and describe the expected outcomes.

STUDENT PROMPTS AND GUIDING QUESTIONS:

- What form of energy will be used and why?
- How will you demonstrate energy conservation?
- What materials are needed?
- What environmental factors should be considered?
- How do material costs and other creative constraints factor in?
- Justify your particular design choice.

SIGNS OF STEP COMPLETION

The students will present a detailed description of the solution as well as a written plan of how it could be carried out. Look for the following in the plan: a materials list with budget (if building a physical model or conducting lab research), detailed directions, and expected outcomes.

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
STEP FOUR

CREATE

PURPOSE OF STEP

Follow the design plan and construct the solution.

STUDENT PROMPTS AND GUIDING QUESTIONS:

• Use all research, knowledge gained, and the design plan to create the solution.
• Repeat any of the previous steps should issues arise during the building process.
• Consider the parameters of the challenge and what needs to be accomplished for a successful challenge.

SIGNS OF STEP COMPLETION

The students will construct the solution and share with the facilitator.

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
STEP FIVE

TEST & IMPROVE

PURPOSE OF STEP
Test the design and collect qualitative and quantitative data. Discuss results and compare with the expected outcome. Seek areas of improvement and make changes where needed.

STUDENT PROMPTS AND GUIDING QUESTIONS:

- What will need to be observed (qualitative data)?
- What information can be put into a chart or graph (quantitative data)?
- Create data tables, graphs, photographs showcasing data, etc.
- How will you demonstrate conservation of energy?
- How will you evaluate the trade-offs of your chosen energy source?

SIGNs OF STEP COMPLETION
The students will keep records of all test trials and share data with the facilitator. Entries should include both qualitative and quantitative data. The students will also share recordings of any improvements made to the solution and the effect they had on the outcome.

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
STEP SIX

SHARE

PURPOSE OF STEP
Communicate what was learned throughout the challenge. Share the design process, data, and conclusions on how the solution answers the challenge question.

STUDENT PROMPTS AND GUIDING QUESTIONS:
- Develop a presentation including knowledge gained, design plans, and materials used to develop a potential solution that is creative and sustainable.
- How is your solution an appropriate, innovative solution that realistically responds to the precise design competition problem?
- How does your solution address budgetary constraints, timeline issues, and other potential challenges?
- How successful was your solution in addressing the elements of the challenge?
- Describe and/or demonstrate what you learned from this challenge.

SIGNS OF STEP COMPLETION
The students will present what was learned through the design process, including sharing how the solution addresses the problem, key aspects of design, data from test trials, and end results.

AT THE COMPLETION OF THIS STEP, DIRECT STUDENTS TO THE REFLECTION QUESTIONS IN THE “GROWING GREEN STUDENT GUIDE.”
